MISSING PIECES

“THE RIGHT FIT” - SOFTWARE

Let's cover a company who decided to automate their company from raw material receipts all the way through manufacturing and shipment of finished goods. This is an actual Scanco customer, but we are not going to use their name - so today they will be named "Efficiency Inc."

- ✓ It's flexible. Flexibility is one of those commonly touted warehouse management and manufacturing automation software features (especially in today's age of the Cloud and mobile options), but how do you know if the solution is truly flexible enough to fit your warehouse's needs?
- ✓ It talks "SMAC." SMAC (short for: Social, Mobility, Analytics and Cloud) capabilities are a must for any modern-day manufacturing and distribution company. By pairing these four technologies, you can enhance your warehouse management and manufacturing skills and start improving upon business goals. With access to social tools, mobile features, data analytics and Cloud technology, you have everything you need to manage your business data so you can make more effective business decisions.
- ✓ Supports future innovation. Your warehouse management and manufacturing technology should support all of your company's current and future ventures, as well as provide you with the tools you need to reach those goals. You need a solution that gives you visibility across the global supply chain and system-wide transparency

“THE RIGHT FIT” - HARDWARE

With all the options available for barcode scanners today, it's important to find the right device for your business needs. Determining how you will use the scanner and what features you need will make the decision process easier.

- ✓ Where will the scanner be used? Is it a rugged environment?
- ✓ How often will it be used? What kind of barcodes will you be reading?
- ✓ How will the scanner be used?
- ✓ Can you stay connected to a PC?

Scaling your warehouse inventory management doesn't have to feel like a never-ending cycle of receiving, picking, packing, and shipping with no method to the madness. If you take the time now to put warehouse organization into practice on a daily basis, it can actually feel quite refreshing. Operations can run smoothly, products can get picked faster, and employees can be happier with the right tools and techniques. So don't wait. Make the decision and take the steps to improve your warehouse inventory management today!
