

Scanco Make-To-Order

Scanco Manufacturing Automation is a suite of enhancements designed to provide manufacturers with a more efficient and effective manufacturing process through Sage 100's Work Order Module.

Scanco Make-to-Order provides make-to-order, assemble-to-order, and engineer-to-order manufacturers a more efficient manufacturing process through intelligent system tools.

Build Availability:

The Build Availability screen is accessible from several screens and menus throughout the system:

- Sales Order Entry
- Work Order Entry
- Work Order Main Menu

The screen (pictured) displays detailed information on build items and components to help users determine whether the build can be completed based on component availability.

The Build Availability Inquiry provides a single, easy-to-read screen to assess the component availability of Build Items.

Occur	Component Item Code	Qty/Parent	Qty Required	Qty On Hand	Qty Allocated	Qty Avail/Short	Qty On Order	Description
1	BOARD-04500	3.00	18.00	24.00	429.00	471.00	33.00	MOTHERBOARD

SCANCO MAKE-TO-ORDER

Auto-Generate Work Orders from Sales Orders:

The batch utility provides a single screen where users can select SOs en masse to generate Work Orders. It automatically merges in the appropriate Work Order Header information, Routing Operations, Materials, and Scheduling, based on the SO Promise Date. Auto-generated Work Orders will always link back to the originating Sales Order.

Multiple selection criteria including:

- Sales Order Number
- Sales Order Date
- Sales Order Ship Date

Sales Order Type or Status Designate Work Order Specifications, as well, to aid in the proper generation of Work Orders (most options are a result of the Manufacturing Efficiency module):

- Enter in Released Status
- Schedule Method
- Summarize Like Items + Finished Good and Sub Replenishment Handling
- Create Sub-Assemblies

Automatic Work Order Selection

Auto-Generate Work Orders from Sales Order Lines:

In addition to the batch utility, the system also allows for “on-the-fly” Work Order generation from a single Sales Order Line. Users will be prompted to create Work Orders and sub-assemblies for the parent item separately. Once the confirmation to create Work Orders has been accepted, the new Work Order number will automatically tie to the Sales Order Line that was used to create it.

Provides fast W/O creation at the time of Order entry to ensure timeliness.
