

Advanced Shipping Notification (ASN)

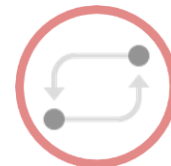

Warehouse management ASN/Label Integration

Scanco is proud to offer Advanced Shipping Notification integration with SPS Commerce on iOS, Android, or Windows Mobile. Connect all EDI data with sales orders imported within SPS Commerce to Scanco's Shipping Data Entry picking process.

Features & Benefits

- Automatically assign pallet id to specific orders
- Automatic label printing
- Create case packs for SPS Commerce
- Eliminate backordering without notification
- Seamlessly generate picking information
- Pick and pack from any iOS, Android, or Windows mobile device without manually entering pallet information into Sage 100

Connect all EDI data with sales orders imported within SPS Commerce

This powerful enhancement automates ASN delivery to the customer. Packed orders within Scanco Warehouse will write information collected during the picking process, automatically creating and sending your ASN with pallet contents to your client. Additionally, ASN label printing within the SPS Commerce system is possible on your Scanco Warehouse cloud environment with the click of a button.
